

GitHub Website Branch Workflow (Group Version)

1. Open the repository on GitHub

- Go to the repository on github.com

2. Create a new branch

- Click the branch dropdown (likely says “main”)
- Type a new branch name (e.g. “charlie-graphs”)
- Press Enter to create it

3. Edit files

- Navigate to the file you want to update
- Click the pencil icon to edit
- Make your changes

4. Commit your changes

- Scroll to the “Commit changes” box
- Write a clear commit message
- Make sure you are committing to your branch (not main)
- Click “Commit changes”

5. Create a Pull Request

- Open the “Pull requests” tab
- Click “New pull request”
- Base: main
- Compare: your branch
- Click “Create pull request”
- Add a short description

6. Merge into main

- Once approved, click “Merge pull request”
- Confirm the merge
- Your changes are now part of main

7. Delete the branch after merging

- Click “Delete branch” once merge is complete
- Only create a new branch when you are ready to start new work

Team Workflow Tips

- Always message the group chat before editing to avoid working on the same file at the same time

Make frequent, small commits

- Never commit directly to main
- Only work on a branch you created and understand
